Exercise 1: Tabular Report

Start with the Excel file "[Lab 7 – model.xlsx](#)". If you're using Excel 2010, please use this file instead: "[Lab 7 – Model - 2010.xlsx](#)". You have imported VanArsdel's US and International sales data in Module 4 and created several measures in your data model using DAX in Module 5. You need to create a Pivot Table showing monthly unit sales, by Category, by Manufacturer, for the year of 2014.

The report will look as follows (for report formatting tips see the last Unit of the lab):

Year	2014														
Total Units			Month												
Category	Manufacturer	January	February	March	April	May	June	July	August	September	October	November	December	Grand Total	
Mix	Abbas	306	386	555	770	592	499	474	396	474	301	229	298	5280	
	Aliqui	270	303	428	567	596	550	262	274	228	158	136	165	3937

Lab Question

4.0/4.0 points (graded)

When you summarize data using an Excel Pivot Table, each number found in a Pivot Table cell represents one or more records in the pivot table's source data and is directly related to the Column and Row fields you used in the Pivot Table. A quick way to review this underlying set of records is to use the Show Details feature - right click

within the desired cell and select Show Details from the menu options. This is commonly called Drilling down into the data and can also be achieved by double-clicking in the cell in question.

Answer the following questions by using the tabular report you created.

How many rows (transactions) made up VanArsdel sales for Youth Category and Abbas Manufacturer in the month of January 2014?

11

How many rows (transactions) made up VanArsdel sales for Rural Category and VanArsdel Manufacturer in the month of October 2014?

4

Note: If you cannot drill down into the data, try the following steps:

- 1) Go to the **PowerPivot** Window
- 2) Select **Diagram** View, to view the tables and their connections
- 3) Go to table **Sales** and select the field **Date**
- 4) Right click and select **Unhide from Client Tools**

Submit
